Company Description

Linkface is a spin-off company of Samsung Electronics, founded in 2017, that develops conductive silicone-based flexible biosensor products and health-care wearable devices like ear dehumidifiers for humans and pets. For five successive years, the company has been awarded the CES Innovation Award for its outstanding design and technology.

Product

DearBuds SE

Function and Usage : DearBuds SE is the world's first wearable dehumidifier for ears. This device measures the temperature and humidity in the space in real time using a high-performance sensor. In terms of ear dehumidification technology, there is a manual mode and automatic mode that can be navigated using a software app. With a micro fan, a heat source, and an internal LED, ears are gently dehumidified without any damage.

Marketing and Selling Points : DearBuds SE dehumidifies your ears in a smart way, unlike conventional tools such as cotton swabs and ear dryers which cause damage at the same time. You can also approach ear care in a more trendy way with DearBuds SE's modern technology and design, regardless of whether you are experiencing ear problems. Further, Linkface offers specialized assistance in the solution of software or device problems via direct communication.

DearBuds PE

Function and Usage : While DearBuds PE performs identical functions to the DearBuds SE, it is a stick-type device that can be used by both pet owners and pets, making it ideal for both. Considering the structure that pet ears entirely cover ear holes, it is easy for pets to have ear diseases due to humidity. In addition to taking smart care of these conditions, pet owners can always measure and record pet ear temperature and humidity.

Marketing and Selling Points : Using DearBuds PE, pet owners can monitor their pets' ear conditions 24/7. In addition, they can measure accurate temperature and humidity in 5 seconds and show them on a display. High-performance sensor is internally mounted and IP67-rated waterproof, so long-term use is assured. Also, it produces a whisper-like 35db operating sound without irritating sensitive ears.

Linkface products, including the DearBuds line, are made in Korea and of high quality.
