Company Description

“Dominate space.” The Next AI provides SAAS services that optimize cost, time, and manpower in the logistics, manufacturing, and construction industries through artificial intelligence-based automatic creation of digital twins, real-time indoor location tracking, and lightweight object recognition.

Product

AUTO.AI

Function and Usage : Artificial intelligence-based, spatial information recognition digital twin automatic generation service using Lidar sensors, indoor and outdoor real-time location tracking service module, and object recognition lightweight automatic learning data generation module are integrated to create a digital twin through the AUTO.AI solution. This is a service that reduces construction and utilization costs to 1/20.

Marketing and Selling Points : A solution that provides cost, time, and manpower optimization services through large-scale logistics, distribution, manufacturing, construction, and public space digital twin utilization and AI object recognition services. It automatically and easily creates digital twins based on AI without a developer and supports existing companies' ERP. We provide advanced solutions that can be used immediately for PLM and SCM services.

The Next AI provides 100 CCTV simultaneous AI object recognition and AI location information analysis services and LBS (indoor location tracking) real-time fingerprinting location information service, and AI-based lightweight object recognition learning data generation and service construction using the Unity 3D game engine. This is the field of marketing.

— 오모이 플랫폼 : AI Digitaltwin Platform

Benefit, Digitaltwin Construction and operating Costs 1/20

| AI Realization of cost savings through introduction of automation solutions
