Company Description

INNOCRATIC TECHNOLOGIES, Inc. has been silently at work for two decades - to build the ultimate, "Rational" AI. With innovative user experience & productivity gains, based on exclusive tools & technologies - along with disruptive business models - we bring true revolution over the old, outdated data paradigms while also pioneering the way for the ultimate AI.

Our patented "Data Neural Network" HyperGraph Technologies embody human brain-like, *universal* organization, search, storage, analysis, and understanding of *all* digital data - by relevance, context, & ideas. Enabling the future AI to operate in human-centric, intuitive ways. Designed for privacy and security in decentralized architecture. That's Contexta – the "Universal Graph Objects Platform."

Product

Contexta One (Online Services)

Contexta One Platform is an open, cloud-based, comprehensive online data platform, or "Universal Data OS" for the age of AI - based on revolutionary Universal HyperGraph technology to model after the human brain:

Universally connect, organize, search, store, analyze, and understand, and share all kinds of digital data – with human-centric experience. Everything connected & made sense by context, relevance, and meaning. Think of it as personal "Jarvis" for all your data.

Available as an app, or for licensing for on-premises/third-party hosting, OEM products.

Contexta Hypergraph DB

Contexta Hypergraph Database is unlike typical graph database, or any other existing databases; Contexta Hypergraph was designed and developed for the sole purpose of building the ultimate, "rational" AI. It is specifically built to become universal, semantic, and object-based: Meaning, it operates not only on literal text/numerical values, but also semantic or contextual meanings... across data objects of all types/formats. This is all thanks to our patented, exclusive "Hypergraph" database engine, which is available for standalone licensing.

Contexta Hypergraph DB offers a human brain-equivalent data storage and analytics today. And the path to "Rational" AI tomorrow.
