Company Description

HoloLab Co., Ltd. specializes in holographic technology (HW, SW) and system-related R&D based on the latest digital HOE technology for seven years from the beginning of its foundation. It uses original digital holographic optical elements to develop system technology and research next-generation holographic technology to carry out various national tasks.

Product**High Transparent Dual Meta-Holoscreen**

Function and Usage : VHOE Forms multiple pattern recording metastructures simultaneously in a single volume

Interactive hologram form of metamaterial structure based on multiple holograms

Highly transparent function of over 85% capable of displaying images in both directions simultaneously

Marketing and Selling Points : World's First Technology: This product is the world's first bi-directional full-color high-transparency meta-structure hologram screen, showcasing our groundbreaking technical capabilities.

Versatile Applications: It can be applied in various fields such as bi-directional screen advertising, vehicle displays, kiosks, interpretation displays, and face-to-face conversation systems between patients and doctors.

High Transparency Screen Function: This product provides an excellent viewing experience to users with its ability to display bi-directional simultaneous images on a screen with over 85% transparency.

Leading Meta-Hologram Technology: This product demonstrates the leading development of next-generation technology by domestic companies based on the original meta-hologram technology, highlighting our strong technical capabilities.
