Company Description

Geoplan provides UWB-based positioning networks and services for tracking vehicles, people and assets indoors. With over ten years of experience as its foundation, the Geoplan team commercialized their innovation to create a complete precise location product and platform. Using UWB measuring technology, we are developing and supplying solutions to various industries. We have been working on more than 200 projects based on our long experience and reliable technology, and we are constantly striving to create customer value.

Product

UWB TAG

Function and Usage : Tags are small devices attached to tracking targets.

RTLS tags are used for asset tracking, vehicle tracking, material or process flow analysis, and employee position tracking.

Marketing and Selling Points : Improve Productivity and Efficiency by Tracking and Managing Industrial Assets with GEOPLAN Asset Tracking, the Most Cost-Efficient Real-Time Location Solution

UWB LOCATOR

Function and Usage : Locators provide position and data services that enable seamless

installation in any space and allow two-way communication with all UWB devices.

Marketing and Selling Points : The Most Cost-Efficient Real-Time Location Solution with Ultra Wideband Technology
