Company Description

We provide solutions for the compact living spaces of single-person households. We create an autonomous living space consisting of a living room, bedroom, study, and dining room within a confined area of 2 square meters, with adjustable robotic furniture and residential provisions.

Product

Ceily

Function and Usage : Vertically adjustable furniture

Vertically adjustable furniture transitioning between the functionalities of a bedroom and a living room.

When you wake up in the morning, the bed, which occupies space, can be raised to the ceiling, allowing the space to be utilized as a living room. Below, there is a system furniture that allows the installation of desired options such as a sofa, table, and more.

Marketing and Selling Points : Through the adjustability of our furniture, you can effectively diminish the spatial dominance traditionally associated with furnishings. Through our innovative product, the optimization of space and elevation of efficiency are attainable, paving the way for the creation of a novel revenue structure.

Elegantly designed, Ceily, vertically adjustable furniture that ingeniously optimizes both living room and bedroom functionalities in space with spatial limitations.

Wally

Function and Usage : Horizontally adjustable furniture

Horizontally adjustable wardrobe with multifunctional capabilities for versatile transformations. Wally elevates storage efficiency in confined spaces, this horizontally adjustable wardrobe not only transforms seamlessly but also doubles as a stylish workspace.

Marketing and Selling Points : Wally represents a sophisticated solution in the realm of horizontally adjustable furniture. This innovative furnishing not only caters to the functional needs of a workspace and provides a comfortable setting for TV viewing but also exhibits the versatility to transform into a wardrobe, enhancing the overall efficiency of space utilization within residential settings.

Wally is designed as an articulate piece of sliding furniture. Its seamless operation, driven by a meticulously engineered system of horizontal rails, ensures both precision and grace in the opening and closing motions, thereby enhancing the user experience with an aesthetic appeal and ergonomic design.
